

# CYPRES 2

Everything else is fun.

We would like to inform you about **two new features of the CYPRES 2.**

## Offset Feature

CYPRES 2 now offers the previous used altitude adjustment again at the beginning of the normal adjustment sequence.

If it's needed, just let the button go when the value appears on the display.

This innovation makes life easier for everyone who sets the altitude reference on a regular basis, e.g. because his take off and DZ are on a different elevation.

## Flight Counter

CYPRES 2 now offers a flight counter, which continuously counts the flights with that unit.

To view the total number of flights on the display simply press the push-button immediately after the selftest ends up with 0▼.

This innovation is useful for DZ rental rigs, tandem equipment, etc.

These features can only be applied on CYPRES 2. To get them please kindly arrange shipment to Airtec or SSK via a CYPRES dealer. They will be incorporated right away and without charge. They will be implemented automatically within the regular update procedure of the CYPRES 2 factory maintenance.

As per usual with CYPRES these additional features are designed in a way that their use can not lead to unintentional setting or mishandling of the device.

Many thanks for reading.

We wish you all safe and trouble free skydives,

Your Airtec Team
